Sample Signs:

NOTE: This restricted bridge list/map is not static. As bridges are replaced or rehabilitated, the load limit restrictions may be removed or changed. Also, as existing bridges deteriorate or are damaged, load limit restrictions may have to be placed upon them. It is imperative that all users of this table make certain that they have the latest version. Montgomery County will make every effort to keep users informed of any changes but cannot accept responsibility or liability for any user not utilizing the latest version of this document. Montgomery County's bridge posting program seeks to make known the safe load carrying capacity of structures which cannot presently withstand the maximum legal load permitted on the highway. The sign restrictions meet federal bridge inspection standards and requirements. To minimize inconvenience and difficulty, truckers are urged to consult a map and this table in planning or predetermining available routes for a particular vehicle and load. In all cases, the weight limit signs posted at Montgomery County bridges shall take precedence over this table and map.
